

Stand Quality Management of Southern Hardwood Forests

Steve Meadows and Danny Skojac

USDA Forest Service

Center for Bottomland Hardwoods Research

Cooperators

- **Louisiana Dept. of Wildlife and Fisheries**
- **Gulf States Paper Corporation**
- **Temple-Inland Forest Products Corp.**

STAND DENSITY MANAGEMENT

PUTNAM'S TREE CLASSIFICATION SYSTEM

- **Preferred growing stock – “leave” trees**
- **Reserve growing stock – “storage” trees**
- **Cutting stock – “cut” trees**
- **Cull stock – “cull” trees**

PROBLEMS

Putnam's Tree Classification System

- **Reserve class is poorly defined, too broad, and becomes a “catch-all” class**
- **Classification system is not well-suited for poletimber trees in sawtimber stands**

NEW

**HARDWOOD
TREE CLASSES**

BASIS FOR NEW TREE CLASSIFICATION SYSTEM

- **Species**
- **Crown class**
- **Current condition and future risk of mortality or degrade in merchantability**
- **Bole quality**
- **Expected change in value over time**

Preferred Growing Stock

Desirable Growing Stock

Acceptable Growing Stock

Cutting Stock

Cull Stock

Superior Poletimber Stock

Inferior Poletimber Stock

COMPARISON

Putnam's System

- Preferred
- Reserve
- Cut
- Cull

New System

- Preferred
- Desirable
- Acceptable
- Cut
- Cull
- Superior Pole
- Inferior Pole

TREE CLASS DISTRIBUTIONS

Percent of Basal Area – Pre-Harvest

New

STAND DENSITY MANAGEMENT

PROBLEMS

Stand Density Management

- **Timber marker must decide which Reserve trees to cut and which ones to leave**
- **Hard to accurately and consistently visualize the prescribed level of residual stand density**
- **May have to leave poor trees or cut good trees to maintain target residual density across the stand**

Diameter Growth

Dominant/Codominant Red Oaks

STAND QUALITY MANAGEMENT

POSSIBLE PRESCRIPTIONS

- *Acceptable with Superior Poletimber*
Leave Pref, Des, Acc, and Sup Pole
- *Acceptable with No Poletimber*
Leave Pref, Des, and Acc
- *Desirable with Superior Poletimber*
Leave Pref, Des, and Sup Pole
- *Desirable with No Poletimber*
Leave Pref and Des only

GUIDELINES TO IMPLEMENT STAND QUALITY MANAGEMENT

- **Conduct thinning when stocking exceeds 100% and initial quality is acceptable**
- **Select appropriate prescription**
 - a. **initial stand quality**
 - b. **stage of stand development**
- **Mark the stand to remove only those tree classes specified in the selected prescription**

COMPARISON OF PROPOSED PRESCRIPTIONS

PRESCRIPTIONS	TPA	BA	QMD	STOCK
Acc/Sup Pole	60	77	15.4	63
Acc/No Pole	42	71	17.5	57
Des/Sup Pole	41	55	15.8	45
Des/No Pole	23	49	19.7	39

PROBLEMS

- **Selection of inappropriate prescription may compromise residual stand quality and value**
- **Residual density may not be uniform across the stand**
- **Desirable residual trees may be clumped**
